

PYXELBLAZE

CHMOD Lab

Visual Linux Permissions Calculator

Developer: PyxelBlaze | Platform: iOS (iPhone) | Website: <https://pyxelblaze.com>

Short Description

CHMOD Lab is the missing utility for Linux System Administrators, Developers, and Students. It transforms the abstract concept of Linux file permissions into a visual, interactive interface.

Stop guessing Octal codes-visualize them.

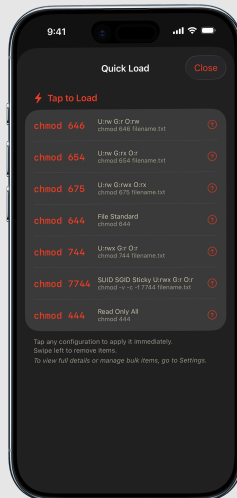

Long Description

Memorizing "755", "644", or "rwxr-xr-x" is essential for server management, but mistakes can be dangerous. CHMOD Lab provides a bi-directional calculator that instantly converts between Octal and Symbolic formats.

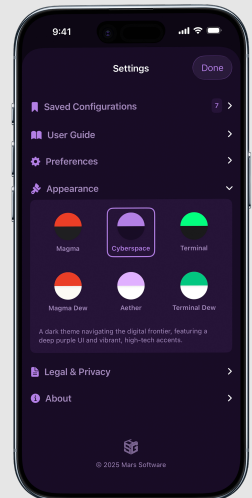

Unlike generic calculators, CHMOD Lab is built with a "Privacy-First" architecture. It runs 100% offline, collects no user data, and contains no advertisements.

Octal Calculator

Quick Load

Dark Mode & Settings

KEY FEATURES

Bi-Directional Conversion	Zero Latency
Interactive UI	Privacy Focused
Educational Visuals	6 Themes

FAST FACTS

Release Date:	01/01/25	Free
Category:	Utilities / Education	
Languages:	English	
Size:	6Mb	

ABOUT THE DEVELOPER

PyxelBlaze is an indie iOS studio engineered for utility and aesthetics. We reject the "Subscription Fatigue". We build tools, not traps.
